

Reporting of Mineral Assets

This recommendation is not part of the Exchange's Information rules, although it should be regarded as general advice.

The Swedish Mining Association has produced recommendations for how companies engaged in mineral exploration, development, and extraction of minerals shall disclose information to the stock market regarding mineral exploration results, mineral assets and mineral reserves. The OMX Nordic Exchange Stockholm advises companies within these business areas to follow these recommendations. The English translation is available on the Swedish Mining Association's website at www.mining.se.
